TFS selects and deploys Clinical Force CTMS

TFS Trial Form Support International (TFS) has as of November 2008 selected Clinical Force as its Clinical Trial Management System (CTMS). The CTMS system will be utilized in the two business areas; early clinical development and project delivery, responsible for phase I/II and phase II-IV trials respectively.

"TFS chose Clinical Force's Clinical Trial Management System as we believe that this system best fulfils TFS and our clients needs. The web-based CTMS system will ensure that both TFS Project Leaders and clients have immediate access to project data at all times. This information will assist our Project Leaders in planning, managing and reporting projects on time and identifying potential issues so that they can be addressed in a timely manner" says Mr. Alistair Bone, Director Global Quality Assurance and Training at TFS.

TFS is currently responsible for managing more than 200 clinical trials across 20 countries in Europe and the USA and the complexity of the trials is increasing in terms of geographical locations, patient populations and supportive medical techniques. The Clinical Force CTMS will be an important system to host all ongoing trials to measure operational- and quality assurance metrics and serving as an information platform for various management decisions and business processes within clinical operations.

"TFS is a very exciting company that has demonstrated scale and growth across a number of regions in the last few years. We are very excited to be working with such a dynamic and successful organization. Our solution will provide TFS with clear competitive advantages. Clinical Force will support TFS's continued growth and deal with market pressures of delivering on time to budget whilst maintaining quality throughout the clinical trial process. Further innovations that we plan to release in the coming 12 months will further extend TFS's competitive advantage" says Mr. Marcus Thornton, Chief Executive Officer at Clinical Force.

The Clinical Force CTMS is a web based solution with reduced maintenance and overhead costs and being accessible on a 24 hour basis. The Clinical Force CTMS has capabilities in managing phase I trials through to international and complex pivotal trials and regional observational studies.
